SUMMARY

Software Engineering Intern at Bajaj Finserv (Martech & GenAI) specialising in agentic AI tooling, enterprise AEM development, and CI/CD automation. Experienced in building AI-first workflows — from custom Microsoft Copilot Studio agents to PR-triggered documentation pipelines — that measurably improve team productivity and code quality at scale. Comfortable working across cross-functional, multi-disciplinary teams and communicating technical solutions clearly to both developer and non-technical stakeholders.

EDUCATION

Manipal University Jaipur

B.Tech in Information Technology — Minor: Web Development

Jaipur, Rajasthan

Expected May 2026

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Java, Python, SQL

Frameworks & Libraries: React, Next.js, Node.js, Express, SolidJS, Adobe Experience Manager (AEM)

AI & Agentic Tools: Microsoft Copilot Studio, GitHub Copilot, Vercel AI SDK, n8n

Databases & Cloud: MongoDB, Firebase, MySQL

Tools & Platforms: Git, GitHub Actions, Docker, Maven, pnpm, Power BI, ServiceNow

Core Subjects: Data Structures & Algorithms, OOP, Operating Systems, DBMS, Computer Networks

EXPERIENCE

Bajaj Finserv

Feb 2026 – Present

SDE Intern – Martech & GenAI

Pune, India

- Designed and deployed custom AI agents in **Microsoft Copilot Studio** that answer internal team queries against company knowledge bases, reducing manual information lookup and enabling self-serve access to documentation across the engineering organisation.
- Engineered a 5-stage local CI pipeline (lint → type check → unit tests → pnpm build → Maven build) that mirrors the GitHub Actions environment exactly, acting as a pre-push safety net and eliminating avoidable remote build failures across the engineering team.
- Architected a **GitHub Copilot Spaces** onboarding environment with pre-configured AI context, significantly reducing new developer ramp-up time; used **GitHub Copilot** (Claude Sonnet/Opus models) as the primary AI pair-programming tool across the codebase; layered on a PR-triggered GitHub Actions workflow that auto-generates structured component documentation at merge time — enforcing zero-effort documentation hygiene.
- Built a cross-repository LLD tooling system leveraging Git sparse checkout to selectively pull design contracts from two separate repos and generate downloadable Excel reports on demand via a web interface, replacing a fully manual, error-prone process.
- Drove measurable frontend performance improvements on Bajaj Finserv's production AEM pages by auditing image formats, dimensions, and lazy-loading strategies — directly improving Largest Contentful Paint (LCP) scores.
- Delivered production-grade reusable UI components in React and SolidJS, fully integrated with AEM Sites authoring console, editable templates, and content policies — enabling non-technical authors to manage content independently.
- Diagnosed cross-developer Node.js and dependency version mismatches causing inconsistent builds; designed a **Docker-based containerised development environment** to standardise the stack and eliminate environment-specific bugs across the team.

Requin Solutions

Aug 2025 – Dec 2025

Technical Analyst Intern

- Built machine learning workflows using KNIME for data preprocessing and predictive analysis.
- Created Power BI dashboards and Excel reports to surface actionable business insights for stakeholders.
- Leveraged **ServiceNow** for internal IT workflow management and process tracking across the organisation.
- Contributed to full-stack web development, building and enhancing frontend and backend features for internal data-driven tools.

Dectify.in

Feb 2025 – Apr 2025

Web Design Intern

- Designed responsive client-facing web interfaces in collaboration with UI/UX teams.

PROJECTS

CWV Agent | *PageSpeed API, MCP, VS Code Extension* | *Internal Tool* — *Bajaj Finserv*

- Built an **end-to-end agentic pipeline** for Core Web Vitals remediation — when a CWV bug ticket is raised (with a page URL), the agent calls the PageSpeed Insights API to diagnose LCP/CLS root causes, then a “Fix” action launches VS Code with an **MCP-integrated workflow** that automatically proposes and applies code-level fixes informed by the API analysis.

StackPilot-AI | *Next.js, Vercel AI SDK, React* | [Live](#)

- Built an **AI-first product assistant** embodying agentic AI principles — a single prompt triggers a multi-step autonomous pipeline that generates executive summaries, expanded feature specs, recommended tech stacks, and working starter code, demonstrating end-to-end AI orchestration.

PeakPursuit | *React 19, Supabase, Leaflet.js, Vite* | [Live](#)

- Built a community-driven trekking and camping platform for Indian terrain (Maharashtra-focused) featuring an interactive Leaflet.js map with custom trail/camping markers, dynamic trail detail pages with elevation, permits, and photo galleries, and a community review & rating system — all backed by Supabase (Postgres + Row Level Security) for auth, real-time data, and secure per-user CRUD operations.

Shopify App Clone | *React, Firebase* | [Live](#)

- Implemented end-to-end authentication, CRUD operations, and persistent cart state; deployed live with Firebase backend.

FlowForge | *React 19, Three.js, WebGL, Tailwind CSS, Vite* | [Live](#) | [GitHub](#)

- Built a production-ready **interactive 3D CFD visualization platform** enabling real-time aerodynamic and hydrodynamic flow analysis for custom geometries; architected high-performance WebGL viewport with 60+ FPS GPU-accelerated particle systems and dynamic streamline generation using Three.js.
- Engineered STL/OBJ model import pipeline with automatic geometry centering, scaling, and multi-axis orientation detection enabling users to upload arbitrary CAD models; implemented real-time physics calculations computing drag/lift coefficients, pressure distribution, and turbulence effects with instant metric updates.
- Developed responsive control panel with organized parameter sections, custom-styled scrollbars, and intuitive sliders for adjusting flow dynamics; deployed on Vercel with GitHub Actions CI/CD for continuous production deployment.
